CASTELATION® AND CASTELATION® SCREENCLAD

The fresh appeal of modern battens. Castelation® and Castelation® Screenclad, profiles complement contemporary design trends in commercial and residential buildings, and are available in various timber species, and pre-finished coatings for either internal or external applications. The continuous channels and shadowlines achieve a multi-dimensional batten look that is efficient and reliable.
TIMBER SPECIES

WESTERN RED CEDAR [WRC]

A versatile timber, it is commonly used for applications such as cladding, windows and joinery. Renowned for its natural beauty and durability. This exceptional wood has rich tones ranging from mellow ambers, to reddish cinnamons and sienna browns. Its texture is uniform and fine-grained, with a satin lustre.

SPOTTED GUM HARDWOOD [SPG]

Australia's premium native hardwood with a striking appearance and a high degree of natural durability and strength, making it an ideal timber for a variety of structural, exterior and interior applications.
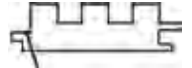

IRON BARK [IB]

Its colour varies from pale to rich reds as well as browns. The grain is usually interlocked, with a moderately coarse texture. It is extremely hardwearing and highly durable.

HEMLOCK [HEM]

A softwood that produces a beautiful pale timber with a uniform, attractive grain perfect for a wide range of commercial uses from pulp and construction to furniture and carving. The timber is used in construction but as a softwood is not durable and requires treatment for external use. Ideal for internal paneling.

BLACKBUTT HARDWOOD [BB]

Commonly grown hardwood that has attractive colouring from cream to pale brown, sometimes with a slight tinge of pink. Its grain is usually straight and texture is medium and even. Blackbutt is a versatile timber and is used for structural, exterior and interior applications.
