

Alu Selekt Channel and Castellation Screenclad

Alu Seleкта Channel and Castelation Screenclad

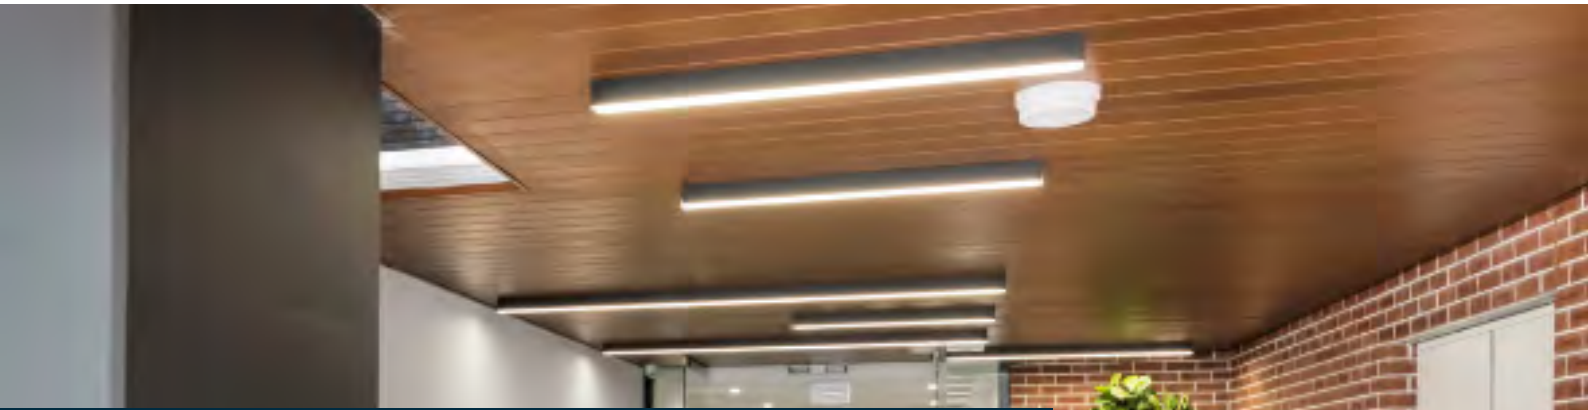

A new standard of durability

Modinex Alu Seleкта Channel and Castelation Screenclad is an innovative new product made from highly durable aluminium. This timber – look non – combustible cladding works interchangeably with Euro-Seleкта profiles for a seamless look from top to bottom. Eco-friendly, low maintenance and incredibly durable, it's ideal for high rises and bushfire rated areas.

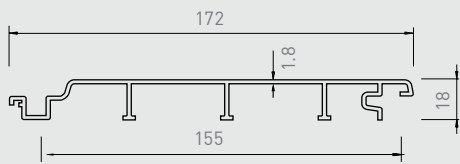

It's a new standard in aluminium cladding, offering new levels of style, new levels of choice and a truly realistic looking timber alternative. Each panel is finished using a powder on powder coating technique, ensuring panels are unique with a natural appearance. Match colours such as Dark Cedar, African Ebony, Silver Oak or Cedar to their Euro Seleкта counterpart for a seamless monochromatic style, or mix and match with the many other colour profiles available in aluminum profiles to create eye-catching contrasts and patterns.

You can even utilise our grooved and batten options to achieve different geometric design accents. The Alu Seleкта range is non-combustible in accordance with Clause C1.12(e) of the BCA and permitted to be used where the BCA nominates non-combustible material. Install it with confidence to high-rise buildings or in bush fire prone areas and know the only maintenance you'll need is general cleaning. Aluminium is an ideal choice for Australian climates. It's also incredibly hardy – resistant to insects, wind, hail, rain, and the coating has passed a sea salt spray test as corrosive resistant.

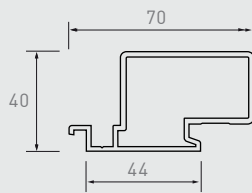

Lightweight and easy to work with, Alu Seleкта range is deceptively tough and will stand up to the hard knocks. Modinex did not cut any corners, creating a robust 1.8mm thick profile body that is superior to alternative lightweight aluminium claddings on the market. The natural timber panel look comes without all the fuss of sheet panel installation. No need to machine panels off site, adding an expensive and time consuming process to your project. With Alu Seleкта Channel and Castelation Screenclad you simply screw the lengths into place.

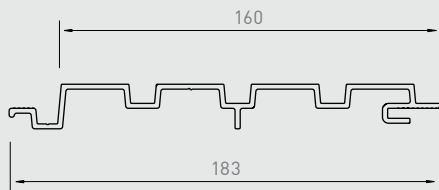

PROFILES

Alu Seleka 155 [ALUS-AL-155x18]

Batten [ESECBP]

Alu Seleka Castelation Screenclad 160 [SCE-AL-160X20]

High rise cladding

Alu Seleкта Channel and Castelation Screenclad gives the genuine and unique look of timber, with the toughness of aluminium. A smart timber alternative for high rise buildings that need a non combustibile material. Use it for:

- High rise buildings
- Refurbishing commercial buildings
- Large scale commercial facades
- Bushfire prone areas
- External feature facade cladding for domestic and commercial applications
- Feature cladding for soffits
- High-exposure, difficult to access areas
- Low-maintenance substitute for timber feature cladding
- Feature facade cladding for multi-storey apartment buildings, where maintenance is difficult
- Gable ends

Fire Rating

There are so many great reasons to choose Alu Selekt Channel and Castellation Screenclad

Non combustible

Alu Selekt Channel and Castellation Screenclad is AS1530.1 compliant, a non-combustible material.

Installer friendly

Pre-finished profiles and simple fixing system makes for quick and easy installation.

Ideal timber substitute

Perfect for use in high-exposure or difficult-to-access areas.

Rot and pest proof

Limited 25 Year Warranty

Guaranteed quality and peace of mind. Powder coating manufacturer's warranty.

Accessories available

Range of smart aluminium trims and accessories available. Ask our helpful staff for more information.

Realistic

Timber grain replica is not blurry or distorted. Sharp patterns create a natural appearance.

Low maintenance

Only general cleaning required - a straight forward process for an intelligent designed profile.

Sustainable

Alu Selekt Channel and Castellation Screenclad is made from aluminium, therefore, a 100% recyclable product.

Diverse looks

Combine colours and groove or batten profiles to create your own unique look.
